## 3x3 8" Mini Strip 2.0

### Securing the Mini Strip to wall or wood stud

1. Identify stud in wall and mark desired height of top hole
2. Drill 15/64" diameter pilot hole
3. Put thread-side of screw through washer then screw through top 3/8" hole in back of the strip into the wall until wood lag can support the weight of the strip
4. Let strip hang. Ensure it is square using a level then mark locations of other hole
5. Hold strip to the side and drill the remaining hole (see illustration to the right)
6. Put thread-side of screw through washer then screw through bottom 3/8" hole in back of the strip into the wall loosely
7. Fully tighten top and bottom screws

If you are not confident in your mechanical skills, please seek the help of a professional to perform the installation.

If attempting to secure strip to wall construction other than wood, the buyer is responsible for using correct hardware.

It is the buyers responsibility to install strip in a location and with hardware capable of supporting the aggregate weight of strip, all gear mounted or stored on it, and any person using it.

### Using the Mini Strip

Ensure detent pin goes through holes on both sides of strip and both sides of attachment. Test unit for stability before each use.
